Release Notes

1. Release Overview

Field	Details
Product Name	CADP Workspace
Release Version	Release 1.0.0 (12)
Release Date	May 19, 2026
Release Type	Patch / Bug Fixes
Prepared By	Development Team
Approved By	Ganagavathy
Environment	QA

2. Release Summary

This release of CADP Workspace Version 1.0.0 (12) focuses on platform stability, Formula Builder improvements, usability enhancements, tenant-level configuration updates, and mobile platform readiness. Key highlights include the native mobile application release, improved Formula Builder performance for large datasets, support for additional text functions, enhanced variable management, approval-based user creation, and multiple fixes across workflows, integrations, role management, validation, dashboards, and mobile functionality.

3. New Features

Feature ID	Feature Name	Description	Impact
	Mobile release v1.0	Native mobile application	Mobile users
	Locked Users and waiting users		Users that incorrectly entered passwords

4. Enhancements / Improvements

Enhancement ID	Module	Description	Benefit
	Formula Builder	Optimized aggregate functions to work efficiently with large datasets. Aggregations involving more than 1,000 records now complete within approximately 2–4 seconds.	Better scalability and reliability of aggregate formulas
	Formula Builder	Ensured formulas work correctly with table components in preview mode, including transaction table preview scenarios.	Ensures reliable formula validation in transaction table preview scenarios
	Formula Builder	Added 3 new text functions: STARTS_WITH(), ENDS_WITH(), and CONTAINS() for text matching.	Enables flexible text matching and validation in formulas, improving rule-building and data filtering capabilities.
	Platform Variables Metadata	In Metadata, the "GVariables" tab has been renamed to "Platform Variables".	Improves UI/UX with more intuitive naming.
	Tenant Variables	In tenant-level Metadata, the "Global Variables" tab has been renamed to "Tenant Variables".	Improves UI/UX with more intuitive naming.
	Tenant Variables Add/Edit	At the global level, a new "Access" dropdown has been added. Access = Read makes the variable read-only and non-editable. Access = Write allows the variable to be edited.	Provides flexible configuration for access-based variable creation and editing.

Enhancement ID	Module	Description	Benefit
	Tenant Variables Add/Edit	At the global level, a workspace visibility checkbox has been added. By default, when unchecked, the variable is visible only at the tenant level. When checked, the variable is also visible at the workspace level.	Provides flexible configuration for visibility-based variable creation and editing.
	New User Creation	When a new user is created, a new "Approval Type" dropdown is available. Default Approval manages approval automatically. Requires Approval keeps the user creation pending until approval is completed.	Provides flexible configuration for approval-based user creation and management.

5. Bug Fixes

Bug IDs	614, 532, 526, 528, 609, 706, 675, 707, 676, 689, 688, 702, 704, 692, 715, 718, 719, 720, 721, 731, 724, 723, 727, 722, 729, 730, 725, 726

6. Configuration Changes

Configuration	Description	Impact
None	No configuration changes are required for this release.	N/A

7. API Changes

API Name	Type	Description
None	N/A	No API changes are included in this release.

8. Known Issues

Issue ID	Description	Workaround
	Role Management Change Effect	Because some menu structures have changed, certain features may return a 403 status code. To resolve this, edit the role, select the platform feature, and save the role again.
	Scheduler with Integration Not Working	Use manual integrations wherever scheduled integration is required.
	Scheduler with Workflow Not Working	Use the conventional feature-wise approach wherever workflow scheduling is required.
	Formula Builder UI – Field Insertion Through Typing	This issue is currently under review. Use manual field insertion by navigating through the Features, Fields, and Operators tabs.
	Formula Builder – AI-Based Formula Writing/Editing Not Implemented	Use manual formula entry instead.
364	Organization Details → Basic Info: Website URL accepts invalid URL formats without validation.	Expected: Validate the URL format and show an error message for invalid values, such as www.example or example@123.www.example

9. What to Test

- Login & Registration – Login, Sign In with Google, Sign In with Microsoft
- **Create Application**
    1. Start from Scratch
    2. Choose/Create Vertical Template
- **User Management**
    1. Create/Manage Users
    2. Create/Manage Groups
    3. Import/Export Users
    4. Archive/Unarchive Users
- **Groups**
    1. Archive/Unarchive

- **Roles**
    1. Platform Roles
    2. Archive/Unarchive
    3. Workspace Role
    4. Feature Access Level
    5. Data Access Level
    6. User or Group Role Mapping
- **Workspace Management**
    1. Create Workspace
    2. Clone Workspace
    3. Archive Workspace
    4. Workspace Settings
- **Organization Management**
    1. Organization Details
    2. Organization Address
    3. Branding Details
- **Module/Feature Management**
    1. Create/Manage Module
    2. Create/Manage Features
    3. Design components for features
    4. Features and Modules can be published
    5. Audit Logs (Platform & Workspace)
    6. Version Logs (Workspace & Workflow)
    7. Staging
- **Notification & Alerts**
    1. Email Notification & Templates – Create template and use template to send notification
    2. SMS Notification & Templates – Create template and use template to send notification
    3. WhatsApp Notification & Templates – Create template and use template to send notification
    4. In-App Notification & Templates – Create template and use template to send notification
    5. Push Notification & Templates – Create template and use template to send notification

- **Components**
    1. Layouts
    2. Table Components (Data Table, Report Table, Pivot Table)
    3. Data Management (API Integration, Device Integration)
    4. Input Components (Phone Number, Password, Dropdown with Feature as Field Value)
    5. Display and Interaction
    6. Media and Files
    7. Forms and Validation
    8. Utility Components
- **Workflow Management**
    1. Visual canvas for creating workflows
    2. Drag-and-drop node placement
    3. Node connection with visual links
    4. Canvas zoom and pan controls
    5. Grid snap for alignment
    6. Create new workflows
    7. Edit existing workflows
    8. Delete workflows
    9. List/view all workflows
- **Workflow Nodes – Control Flow**
    1. Start Node (workflow trigger point)
    2. End Node (workflow termination)
    3. Condition/Decision Node (if-else logic)
- **Workflow Nodes – Communication**
    1. Email Notification Node
    2. SMS Notification Node
    3. User Task/Approval Node
    4. System Notification Node
- **Workflow Monitoring**
    1. Execution history logs
    2. Workflow instance status tracking
    3. Node-level execution details
    4. Error logs and stack traces
    5. Approval node changes for user selection
    6. Added SLA and escalation reminder for approvals
    7. Added parallel workflow approval node

- **Printing Templates**
    1. QR Code – Generate and Print
    2. Barcode – Generate and Print
    3. Invoice – Generate and Print
- **Role-Based Dashboards**
    1. Role-based dashboard template creation
    2. Dashboard rendering based on created template
- **Scheduler & Task Scheduler**
    1. Create and use Schedule
    2. Create and use Task Schedule
    3. Event-based task schedule
    4. Schedule-based task schedule
    5. Schedule a notification
    6. SMS
    7. Mail
    8. WhatsApp
    9. Push
    10. In-App
    11. Schedule a report send (PDF) through mail from a configured email template.

- **Formula Builder Functionality**
    1. Same Feature
        a. Arithmetic
        b. Logical
        c. Comparison
        d. Text
        e. Math
        f. Date
        g. Conditional
        h. Miscellaneous
        i. Aggregate → with filter conditions and without filter conditions.
    2. Cross Feature
        a. Arithmetic
        b. Logical
        c. Comparison
        d. Text
        e. Math
        f. Date
        g. Conditional
        h. Miscellaneous
        i. Aggregate → with filter conditions and without filter conditions.
    3. Incompatible datatype operations, for example, arithmetic on a text input field, should show a validation error.
    4. Unrecognized fields, functions, or operators should show a validation error.
    5. If external fields are called without where() conditions, it should show MULTIPLE RECORDS FOUND ERROR in preview for non-aggregate functions/operations.
    6. Variables are not working. Review which variables should be displayed in the modal.

- **Formula Builder UI**
    1. On clicking a feature from the feature list, fields in the selected feature should be displayed, except for the current field, to prevent self-call loops.
    2. On selecting external feature fields, where() should appear in the modal.
    3. On selecting where(), the modal should automatically switch to the Feature and Fields tab.
    4. On hovering over a field, field information such as module name and feature name should be displayed.
    5. The Clear button or backspace should work as follows:
        i. First click of clear/backspace will select the token.
        ii. Next click of clear/backspace will clear that token.
    6. Empty formulas should not be saved.
    7. Formulas should not be saved without validation.
- **Integrations**
    1. Step 1: Go to the Integration Type field and select "Third-Party Software".
       Expected Result: A new dropdown field called Select Type should appear.
    2. Step 2: Check the options inside the Select Type dropdown.
       Expected Result: It should contain options including "Third-Party API" and "Google Drive".
    3. Step 3: Choose "Third-Party API" from the dropdown.
       Expected Result: The configuration fields specific to the Third-Party API should be displayed.
    4. Step 4: Change the selection to "Google Drive".
       Expected Result: The system should dynamically display the Google Drive configuration fields: Client ID, Client Secret, and Refresh Token.

10. What to Test on Mobile

- Login – Login, Sign In with Google, Sign In with Microsoft
- Workspace Switch
- Module List
- Feature List
- Components
- Feature Data – View, Edit, Clone, Delete
- Dashboard
- Integration – Weighing Machine, Third-Party API (Budgie, SAP), and Payment Gateways (Stripe, Razorpay, and PayU)
- Theme
