Release Notes

1. Release Overview

Field	Details
Product Name	CADP Workspace
Release Version	Release 1.0.0 (14)
Release Date	May 30, 2026
Release Type	Patch / Bug Fixes
Prepared By	Development Team
Approved By	Ganagavathy
Environment	QA

2. Release Summary

This release of CADP Workspace Version 1.0.0 (14) focuses on platform performance and stability. Key highlights include optimized platform loading time, optimized feature design page loading time, and multiple bug fixes across the platform.

3. New Features

Feature ID	Feature Name	Description	Impact
–	Archive Protection – Feature & Module	When you archive a feature or module, the system checks if any other features are using its fields in formulas, dropdowns, or lookups. If yes, a warning popup appears showing which fields are affected. You can either cancel the archive or click **Force & Reset** to clear those linked fields and proceed.	Prevents other features from breaking silently when a feature or module is archived.
–	Field Delete Protection in Builder	When you delete a field from the builder and save, the system checks if that field is used in formulas, dropdowns, or lookups in other features. If yes, a popup appears letting you cancel or click **Force & Reset** to clear those links and save.	Stops broken formulas and empty dropdowns from appearing in other features when a shared field is deleted.
–	Cascading Formula Clear on Reset	When a formula field is cleared by Force & Reset, any other formulas in the same feature that depend on it are also automatically cleared. This works across any chain — for example, if Formula C uses Formula B which uses the deleted Field A, all three are cleared together in one go.	No partial or broken formulas are left behind after a reset — all dependent formulas in the chain are cleaned up automatically.
–	Formula & Lookup Links Kept When Cloning	When you clone a feature or module, all formula, dropdown, and lookup links to other features are copied over correctly. The cloned feature is also protected — if a referenced feature is later archived, the warning popup will appear for the clone too, just like the original.	Cloned features work exactly like the original — no missing links or broken references after cloning.

4. Enhancements / Improvements

Enhancement ID	Module	Description	Benefit
	Platform	Optimized loading time across the platform.	Faster page loads and improved overall platform responsiveness.
	Feature Builder	Optimized feature design page loading time.	Faster rendering of the feature design page, improving the builder experience.

5. Bug Fixes

Bug IDs	383, 551, 599, 604, 610, 613, 622, 624, 625, 630, 778, 796, 808, 814, 827, 828, 834, 837, 838, 839, 840, 841, 842, 843, 844, 846, 847, 848, 851, 852, 854, 855, 856, 857, 860, 864, 865, 867, 868, 869, 871, 873, 875, 876, 877, 878, 879, 880, 881, 882, 883, 886, 888, 890, 892, 895, 896, 904, 906, 915, 929, 930, 932

6. Configuration Changes

Configuration	Description	Impact
None	No configuration changes are required for this release.	N/A

7. API Changes

API Name	Type	Description
None	N/A	No API changes are included in this release.

8. Known Issues

Issue ID	Description	Workaround
	Role Management Change Effect	Because some menu structures have changed, certain features may return a 403 status code. To resolve this, edit the role, select the platform feature, and save the role again.
	Scheduler with Integration Not Working	Use manual integrations wherever scheduled integration is required.
	Scheduler with Workflow Not Working	Use the conventional feature-wise approach wherever workflow scheduling is required.
	Formula Builder UI – Field Insertion Through Typing	This issue is currently under review. Use manual field insertion by navigating through the Features, Fields, and Operators tabs.
	Formula Builder – AI-Based Formula Writing/Editing Not Implemented	Use manual formula entry instead.
364	Organization Details → Basic Info: Website URL accepts invalid URL formats without validation.	Expected: Validate the URL format and show an error message for invalid values, such as www.example or example@123.www.example

9. What to Test

- Login – Login, Sign In with Google (have to be configured in external providers in Tenants of metadata), Sign In with Microsoft (have to be configured in external providers in Tenants of metadata)
- **Create Application**
  1. Start from Scratch
  2. Choose/Create Vertical Template

- **User Management**
    1. Create/Manage Users
    2. Create/Manage Groups
    3. Import/Export Users
    4. Archive/Unarchive Users
    5. Locked Users
    6. Waiting Approval
    7. Please update existing users in each workspace.
    8. In the Users tab, when creating a new user, the Approval Type default is No Approval.
- **User Preferences**
    1. Profile update – first name, last name updating, profile picture updating.
    2. Change password
    3. Locale and Date-time updating
    4. Interface
        i. Theme change, color change. Color change here will override the brand color for that specific user of that workspace only.
        ii. Records per page is reflecting.
        iii. Language (currently only English accepted)
    5. Customization – module and features are visible based on visibility setting, quick access for that enabled feature is redirecting to feature transactions (records) page.
    6. Privacy & Security
    7. Miscellaneous – Default landing page, preferred currency, auto-save drafts, save interval
    8. Preferred user workspace
- **Groups**
    1. Archive/Unarchive

- **Roles**
    1. Platform Roles
    2. Archive/Unarchive
    3. Workspace Role
    4. Feature Access Level
    5. Data Access Level
    6. User or Group Role Mapping
- **Workspace Management**
    1. Create Workspace
    2. Clone Workspace
    3. Archive Workspace
    4. Workspace Settings
- **Organization Management**
    1. Organization Details
    2. Organization Address
    3. Branding Details
- **Module/Feature Management**
    1. Create/Manage Module
    2. Create/Manage Features
    3. Design components for features
    4. Features and Modules can be published
    5. Audit Logs (Platform & Workspace)
    6. Version Logs (Workspace & Workflow)
    7. Staging
    8. Feature Card and Module Card Customization
- **Notification & Alerts**
    1. Email Notification & Templates – Create template and use template to send notification
    2. SMS Notification & Templates – Create template and use template to send notification
    3. WhatsApp Notification & Templates – Create template and use template to send notification
    4. In-App Notification & Templates – Create template and use template to send notification
    5. Push Notification & Templates – Create template and use template to send notification

- **Components**
    1. Layouts
        1. Column
        2. Section (various nested scenarios)
    2. Data Management (API Integration, Device Integration)
    3. Input Components (Phone Number, Password, Dropdown with Feature as Field Value)
    4. Specialized Input & Display
    5. Display and Interaction
    6. Media and Files
    7. Forms and Validation
    8. Utility Components
    9. Data Config Component
    10. Hyper Link Component
    11. Favorite Component
    12. Analytics & Report Components
        1. Chart Component
        2. Gantt Chart Component
        3. KPI Card Component
    13. Form UI
        1. Table component and Table level formulas, Summary row formulas
    14. Reusable Component
- **Workflow Management**
    1. Visual canvas for creating workflows
    2. Drag-and-drop node placement
    3. Node connection with visual links
    4. Canvas zoom and pan controls
    5. Grid snap for alignment
    6. Create new workflows
    7. Edit existing workflows
    8. Delete workflows
    9. List/view all workflows
- **Workflow Nodes – Control Flow**
    1. Start Node (workflow trigger point)
    2. End Node (workflow termination)
    3. Condition/Decision Node (if-else logic)

- **Workflow Nodes – Communication**
    1. Email Notification Node
    2. SMS Notification Node
    3. User Task/Approval Node
    4. System Notification Node
- **Workflow Monitoring**
    1. Execution history logs
    2. Workflow instance status tracking
    3. Node-level execution details
    4. Error logs and stack traces
    5. Approval node changes for user selection
    6. Added SLA and escalation reminder for approvals
    7. Added parallel workflow approval node
- **Printing Templates**
    1. QR Code – Generate and Print
    2. Barcode – Generate and Print
    3. Invoice – Generate and Print
- **Role-Based Dashboards**
    1. Role-based dashboard template creation
    2. Dashboard rendering based on created template
- **Scheduler & Task Scheduler**
    1. Create and use Schedule
    2. Create and use Task Schedule
    3. Event-based task schedule
    4. Schedule-based task schedule
    5. Schedule a notification
    6. SMS
    7. Mail
    8. WhatsApp
    9. Push
    10. In-App
    11. Schedule a report send (PDF) through mail from a configured email template.

- **Formula Builder Functionality**
    1. Same Feature
        a. Arithmetic
        b. Logical
        c. Comparison
        d. Text
        e. Math
        f. Date
        g. Conditional
        h. Miscellaneous
        i. Aggregate → with filter conditions and without filter conditions.
    2. Cross Feature
        a. Arithmetic
        b. Logical
        c. Comparison
        d. Text
        e. Math
        f. Date
        g. Conditional
        h. Miscellaneous
        i. Aggregate → with filter conditions and without filter conditions.
    3. Incompatible datatype operations, for example, arithmetic on a text input field, should show a validation error.
    4. Unrecognized fields, functions, or operators should show a validation error.
    5. If external fields are called without where() conditions, it should show MULTIPLE RECORDS FOUND ERROR in preview for non-aggregate functions/operations.
    6. Variables are not working. Review which variables should be displayed in the modal.

- **Formula Builder UI**
    1. On clicking a feature from the feature list, fields in the selected feature should be displayed, except for the current field, to prevent self-call loops.
    2. On selecting external feature fields, where() should appear in the modal.
    3. On selecting where(), the modal should automatically switch to the Feature and Fields tab.
    4. On hovering over a field, field information such as module name and feature name should be displayed.
    5. The Clear button or backspace should work as follows:
        i. First click of clear/backspace will select the token.
        ii. Next click of clear/backspace will clear that token.
    6. Empty formulas should not be saved.
    7. Formulas should not be saved without validation.
- **Integrations**
    1. Step 1: Go to the Integration Type field and select "Third-Party Software".
       Expected Result: A new dropdown field called Select Type should appear.
    2. Step 2: Check the options inside the Select Type dropdown.
       Expected Result: It should contain options including "Third-Party API" and "Google Drive".
    3. Step 3: Choose "Third-Party API" from the dropdown.
       Expected Result: The configuration fields specific to the Third-Party API should be displayed.
    4. Step 4: Change the selection to "Google Drive".
       Expected Result: The system should dynamically display the Google Drive configuration fields: Client ID, Client Secret, and Refresh Token.
